

Clear Protective Coating					
Technical Data	DESCRIPTION:	Waxy type liquid, very light straw coloured, faint odour.			
	USED FOR:	TRL-37 is used for providing a harmless non-defacing, protective coating that protects from or retards, rust and corrosion, minimizes the effect of snow and ice, dirt, mud, salt, cold patch, asphalt, paint, markers, etc. from sticking or adhering to surfaces where they are undesirable.			
		Spraying on metal and wooden highway, municipal, street, school, traffic and safety signs, to minimize the build up and sticking of snow and ice without impairing reflectivity.			
		For discouraging and minimizing defacing with paint and writing by vandals on street signs, road abutments, underpasses, guard railings, etc.			
		Protecting from the elements on seasonal equipment whether stored inside or outside, from rust and corrosion. Spraying the cabs, bodies, etc. of salt spreaders and other vehicles to prevent corrosion on painted surfaces and undercarriages.			
		As a release agent for snow blowers, snowplows, dump trucks, front end loaders, graders, construction equipment, concrete forms, etc. to prevent ice and snow from forming on the surface.			
		To prevent wood chips, sawdust, hog fuel, dumpster and garbage packer waste materials from freezing to chip trailers, chip hoppers, rail cars, 30-60 yard loaders, truck trailers, sawmill conveyors, chutes, etc. Garbage packers and waste disposal containers to prevent freezing of garbage to interiors.			
	Cold patch asphalt vehicles and equipment buildup and cleaning problems, winter and summer				
	Package Size: (code)	210 Litre	603711	4x4 Litre	603714

Clear Protective Coating									
Technical Data	<b>ADVANTAGES:</b> Easy to handle, use and store. Will not freeze. Does not contain any silicone. Will not interfere in the pulping process. Chips and sawdust release at the mill will not hang up. Shelf life is indefinite. Anti-stick, anti-rust and anti-corrosion. Will not harm paint, rubber blades, parts, metals, etc. Eliminates down time due to frozen material build-up on mill drag chains and equipment. Will completely protect metal from rust while equipment is being stored, if sprayed on thoroughly. Resists removal by rain, but may be removed easily with steam cleaners, spray on cleaner-degreasers or vehicle wash compounds.								
	<b>APPLICATION:</b> Agitate contents thoroughly before using. May be sprayed on, brushed on, wiped on. Parts may be treated in a dip bath.								
	<u>Chip Release for Trailers</u> Apply the first treatment on a clean, dry trailer. May be sprayed on, brushed, rolled or wiped on. For the initial treatment, one gallon covers approx. 500 sq. ft. Additional treatments require approx. half that amount. Re-apply as necessary when mechanical abrasion finally removes coating.								
	To prevent snow and ice build-up on truck trailer undercarriages, spray once every 4-6 weeks on a dry surface initially. This eliminates the build up of snow and ice and prevents being overweight at weigh scales. Once the undercarriage is treated, garage staff have a clean frame to check wiring, adjust brakes, etc. Down time due to shoveling frozen chips in trailers at mill will be completely eliminated.
